

Ideation Phase

Empathize & Discover

Date	1 October 2026
Team ID	SWTID-2026-3491
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example: Employee Data Import in ServiceNow (Persona: HR Admin / ServiceNow Admin)

SAYS	THINKS
"I get a new Excel sheet of employees every month." "Can we just upload it instead of typing it in?" "Please don't create the same employee twice."	"Will the data land in the right columns?" "What if one wrong row breaks the records?" "I need proof that the import worked."
DOES	FEELS
Prepares the sample spreadsheet and downloads it as .xlsx Loads it with Load Data and runs the Transform Map Checks Transform History and the Employee Test table	Anxious about duplicates and wrong mappings Relieved when the transform shows Completed / Success Confident when the dashboard shows correct counts
PAINS	GAINS
Manual data entry is slow and repetitive Duplicate records after repeated imports Hard to see department and location totals quickly	Bulk import completed in a few steps Coalesce on Employee ID updates existing records safely Reports and an Employee Analytics dashboard give instant visibility

The shaded rows are the six sections of the canvas. Each section is filled for the primary persona.
