

Project Design Phase

Problem - Solution Fit Template

Date	1 October 2026
Team ID	SWTID-2026-3491
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behaviour.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behaviour fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.

Problem - Solution Fit:

S.No	Parameter	Description
1	Customer Segment(s)	HR Admins and ServiceNow Admins who manage employee records received as spreadsheets
2	Jobs-to-be-done / Problems	Bulk-load employee data (Employee ID, Name, Email, Department, Location) accurately; avoid duplicates when data is imported again
3	Triggers	New joiners, changes in email or name, or a fresh Excel file received from an external source
4	Emotions: Before / After	Before: frustrated, worried about errors. After: relieved, confident in clean and consistent data
5	Available Solutions	Manual entry into the table, one record at a time; CSV copy and paste
6	Customer Constraints	Time, risk of wrong mapping, ACL restrictions on creating dashboards, limited ServiceNow experience for beginners
7	Root Cause of the Problem	No staging area, no field mapping and no unique key (Coalesce) between the spreadsheet and the Employee table
8	Behaviour	Admins check Transform History, open the Employee Test list and compare counts after every import
9	Your Solution	Import Set staging table + Transform Map with Coalesce on Employee ID, plus reports and a dashboard for visibility
10	Channels of Behaviour	Online: ServiceNow Load Data, Transform Map, Reports and Dashboards. Offline: preparing and reviewing the Excel sheet
