

Project Design Phase

Proposed Solution Template

Date	1 October 2026
Team ID	SWTID-2026-3491
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Project team shall fill the following information in the proposed solution template.

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Employee data arrives as spreadsheets and is entered manually into ServiceNow, which is slow, error-prone and produces duplicate records on repeat imports.
2	Idea / Solution description	Load the .xlsx file into an Import Set table (u_employee_import), map it with a Transform Map to the custom Employee Test table (u_employee_test), and enable Coalesce on Employee ID so re-imports update records instead of duplicating them.
3	Novelty / Uniqueness	Combines staging, field mapping, Coalesce and Transform History checks into one repeatable beginner-friendly process, extended with reports and a dashboard.
4	Social Impact / Customer Satisfaction	Saves HR time, reduces data-entry mistakes and gives administrators trustworthy employee data and clear visibility.
5	Business Model (Revenue Model)	Internal efficiency gain: lower manual effort and fewer data-quality fixes. The approach can be reused as a template for other imports.
6	Scalability of the Solution	The same Transform Map can handle new spreadsheets; more fields, tables or scheduled imports can be added without redesign.
